

The Big Three

Would you like your pet to live forever?

We can't guarantee that, but there ARE things you can do to help your pet live a long, healthy life. Our pets are exposed to chemicals, pollutants, and stress even though we may try hard to protect them. All of this takes a toll on the body. Supplements help fight inflammation, boost the immune system, and neutralize the damage that occurs in the body.

THE BIG THREE

Antioxidants

Antioxidants are vitamins (like vitamin C), minerals and other substances that neutralize destructive processes in the body called free radicals. This helps to prevent disease and helps the body to overcome existing ones including cancer. They help the immune system so your pet's body can fight off infections and disease. In older pets, they can help give your pet more energy.

We have a product we have used for years and know that it works. It comes as a capsule and can be sprinkled on food.

Fish Oil

Fish oil is high in omega-3 fatty acids and is known to fight inflammation and improve the immune system. You can give too much fish oil so the dose is important. We carry a brand that provides the correct dose for your pet. It is a liquid with a pump that you squirt on the food.

Probiotics

Probiotics are the good bacteria in the intestinal tract. People often think of them to treat diarrhea and they work well for that. However, probiotics also are very beneficial for the immune system. They are especially good for kidney problems as well as digestive problems.

The one we have has several different kinds of bacteria and is one that almost every pet, including cats, will readily eat. It comes in a capsule and can be sprinkled on food.

Summary

A strong immune system is key to keeping your pet healthy. Ideally every pet would be taking these supplements every day. Start supplements early to prevent health problems before they even start.

Your pet may not live forever, but we would love to help your pet live a long, health
